Melting Furnace

Products Details

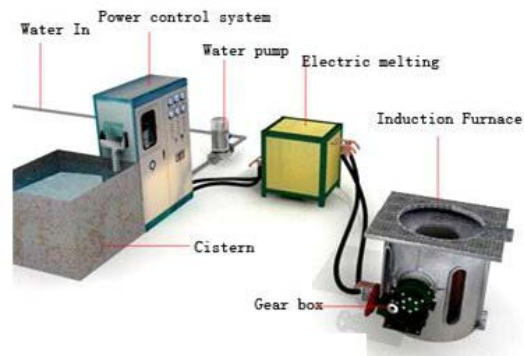

As a professional China melting furnace manufacturer and equipped with a famous factory and plant, as well as providing with melting furnace for sale, welcome to check the process and layout with Hani New Energy and Technology.

Melting furnace / Medium Frequency Furnace

The function of Induction melting Furnace:

Widely used in smelting non-ferrous and ferrous metals. Compared with other casting equipment, intermediate frequency induction furnace having a high thermal efficiency, melting time is short, less burning of alloying elements, wide melting material, small environmental pollution, can accurately control the temperature and composition of liquid metal and so on.

Features of the melting furnace:

- ◆ Heating speed, high efficiency, less carbon oxidation off, saving material costs and extend the life of mold
- ◆ Excellent working environment, improve the labor environment and the company's image, non-polluting, low energy consumption.
- ◆ Uniform heating, core table temperature difference is very small, high precision temperature control.
- ◆ An intermediate frequency type production line equipment mechanical transmission device using a single-station mode. If an intermediate frequency quenching and tempering, annealing carried out by a procedure timeshare. And can be easily adjusted axial position of the sensor to adapt to a variety of specifications billet heating requirements.
